

# ARENA / MANEGE GRADER

This specially designed arena surface management system is suitable for various sand based surfaces. It is designed to grade, harrow and pull in the edges with minimum effort. With an optional roller towed behind the time saved in arena maintenance can be substantial. After the sides have been scraped in using the optional side scraper, one pass is all that is normally required for a smooth rolled surface.

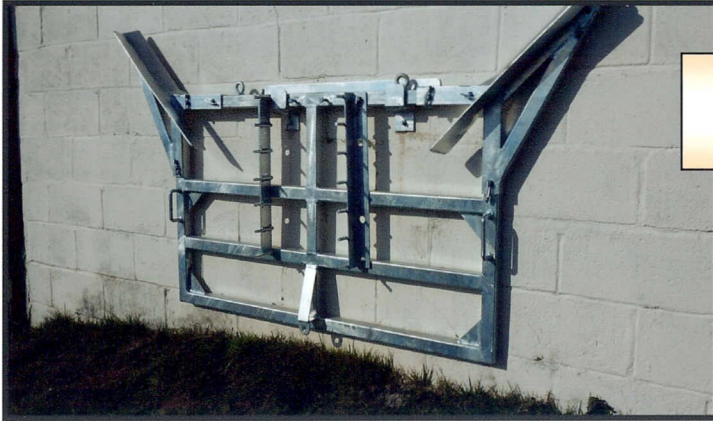

*Basic Grader fitted with optional left hand Scraper*

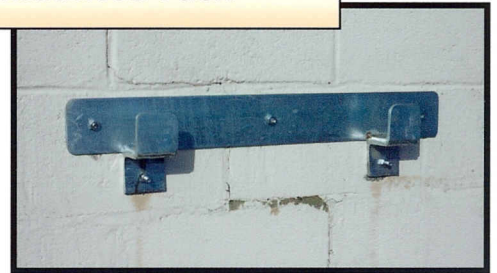

The system is made of durable, long lasting and maintenance free galvanized steel. As standard it is fitted with lifting handles for ease of movement, towing eyes and towing chain, quick release catches for the various accessories and a towing point for a roller. Included with the basic grader is a chain which enables it to be towed behind a tractor, quad or 4 wheel drive

## Accessories

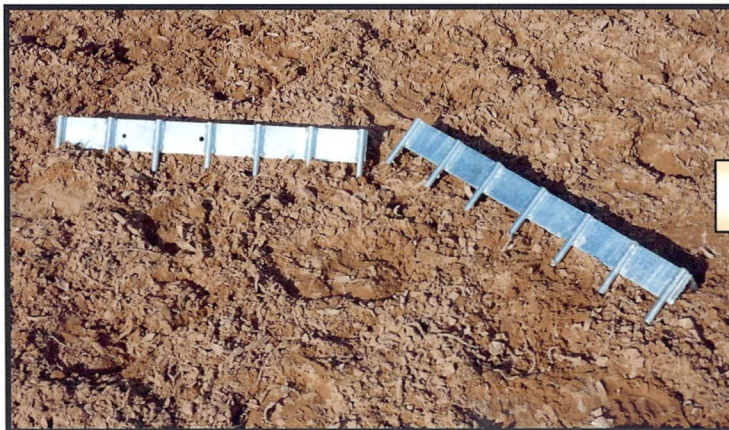

Optional accessories include a wall mounted storage rack, side scraper (either left or right hand) and harrows.

*Complete System stored on wall mounted rack*

*Side Scraper  
(left hand shown)*

*Pair of Harrows*
